**Subject:** PCBs and Recapture Well projects  
**Attachments:** Attach0.html

Mike,

Have been working at home yesterday and today, due to schools closed. If you need to call me, please call my cell phone 724.263.7497.

FYI. Per Tina's email, we must reschedule the copying for the recapture well again to a later date.

Regarding the PCB sampling issue, I suggest another call to Kelly to push for the one foot characterization. Don't know if you want to participate. Although I have not discussed any project specifics, we discussed generalities both in 2005 and recently. She does recognize that the sampling she suggested has a high cost associated with it due to archiving samples or resampling. This may be another issue to push for the one foot characterization. Finally, as this may be a risk based closure, we should be allowed to have a more flexible sampling plan. "Under §761.61(a), the self-implementing approach, cleanup levels are established for high and low level occupancy areas. Under §761.61(c), a risk-based approach is provided that is less prescriptive than the self-implementing approach which allows for site-specific cleanup levels to be calculated."

Smooth seas and fair winds,

Tom
